

## Mailing list & help

There is a [mailing list](#) now. (I was never created before, because it was expected to be done within Askemos - but the project is simply too large to get all these things done in time.)

## Support Development

If you want to grant your time and skills, see [ProjectsOnThePlate](#) and everything "up" from [TODO](#) for subprojects ready to pick up.

## Source

- See [system requirements](#) before you start to [install](#).
- There is a svn in `~askemos/ball-source` group access `askemos-source`. Inquire for personal account. Don't forget to set your `umask` to `022!`. The repository at [sourceforge](#) is irregularly updated. Sorry.
- The last [Askemos source tarball](#) (1 MiB)
- Last stable version (CurrentVersion?): [Askemos source tarball](#).

## Other

ports to other platforms

A [port](#) to [ChickenScheme?](#) is almost complete.

online test

A demo installation: Go to [gonzo's home](#) (use "gonzo" as user name with the password "oznog") to see how it looks alike when logged in. ([TODO](#) the test account is really outdated.)
